

WS77USSG Steam Generator

Ideal for bending wood

Bring your new ideas to life and create new furniture designs and woodworking projects with bended wood. The Steam Generator works great for many wood bending projects. This compact electric steamer runs on a standard 1500 watt, 120v current, which is much safer than many other low-cost homemade steam generators with open burners. The 1.3 gallon tank takes only 23 minutes to steam up and will provide over 2 hours of steam per fill which generates plenty of steam for a small to medium size homemade steam box. The Steam Generator provides many safety features including a 12' cool to touch hose, thermal protectors as well as an automatic suck back valve.

Technical Specs

- 1500 watt element – 120 volt
- Over 2 hours of steam per fill
- Exterior water level indicator
- 23 minutes steam up time
- 12 ft. Super Cool running hose
- 6.5 ft. power cord
- 1.3 gallon tank
- Includes a steam box adaptor

Safety Features

- Thermal Protectors x 2
- Cool to touch hose
- Automatic suck back valve
- Automatic pressure relief valve
