Highly visible 12-strand red rope will not hackle and minimizes fall distance due to low stretch properties. 2-worker system.

Mfr	Part #	Length
MSA	10013153	60' rope

Meets ANSI A10.32 standards and OSHA requirements. Also available in 30'.

Travelsafe® Tempo III Temporary Horizontal Lifeline

Maximum of three persons. Lightweight solution to temporary horizontal fall-arrest applications; can be adjusted from 3' to 60'.

- Tempo III rope adjuster with integral carabiner
- 60' of 1/2" rope
- 2 Endless slings and 1 carabiner
- 3 Travel O-rings and storage bag

Mfr	Part #
Tractel	H66500

Tirsafe® Temporary Horizontal Lifeline Systems

Adds new energy-absorbing technology to any Horizontal Lifeline System (HLL). Fully re-usable HLL Energy Absorber.

- Built-in tension indicator
- Impact indicator
- 3 users per single span
- Single spans up to 65'; Multi up to 300'
- Minimal line deflection

Ladder Safety / Systems

Basemate Ladder System

Extra wide footprint for a stable platform on uneven surfaces. Adjustable feet with ice pick features and non-slip rubber feet keep ladder from moving out of position. Attaches to most ladders in seconds. Patented leveling mechanism features effortless one foot operation.

Mfr	Part #	Weight
Guardian	2475	11 lb

Safe-T™ Ladder Extension System

Designed to attach over the top of the ladder and provide a safe and easy transition from the ladder to a second surface. Requires no tools, drilling or bolting to hold it securely in place. The unit provides two offsetting handrails that can be used to walk through and step on or off of the ladder.

Mfr	Part #	Weight
Guardian	10800	15 lb

Lock-N-Climb

Adds safety and security to 16' to 40' extension ladders. Composed of 6061-Grade Aluminum. Spring loaded and attaches easily to extension ladders for commercial and industrial use.

Mfr	Part #	Description	Weight
Guardian	2460	For 16' - 20' Extension Ladders	9.5 lb
	2465	For 24' - 40' Extension Ladders	13.75 lb

Ladder Stability Anchor

Allows for secure attachment, without penetration, of the fascia board or to rafters. Ideal for workers needing to access rooftops of existing or new homes. No special tools are required and it only takes seconds to attach. Includes 2' and 3' Velcro straps.

Mfr	Part #	Weight
Guardian	10808	2 lb

Complies with OSHA regulation 1926.1053(b)(1)

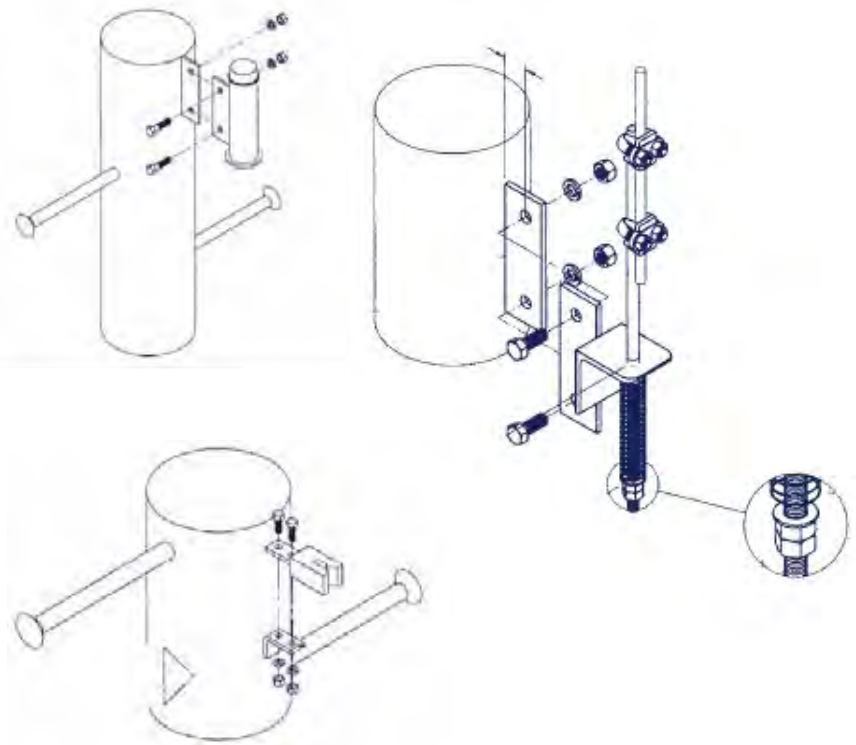

Ladder Assist

Simple hand support device. Easily attaches to most permanent ladders. Spring loaded design.

Wrenches

Adjustable-Head Construction Wrenches

- Versatile wrench fits nuts and bolts to 1-1/2" (38 mm)
- Eliminates the need for carrying several fixed-size wrenches
- Forged from select alloy steel with continuous-taper handle for aligning bolt and/or rivet holes
- Industrial black finish for corrosion resistance

Mfr	Part #	Max Size	Length
Klein Tools	3239	1-1/2"	16"

Erection Wrenches

- Forged from select alloy steel to withstand high-leverage and heavy loads
- Continuous taper of handle makes lining-up bolt holes easy and works on a range of bolt-hole sizes without binding
- Extra large hub area works on larger diameter holes better than other wrenches

The change-out schedule must take into account all factors that may influence respiratory protection including specific work practices and other conditions unique to the worker's environment. If using against substances having poor warning properties, there is no secondary means of knowing when to replace the cartridges/canister. In such cases, take appropriate additional precautions to prevent overexposure, which may include a more conservative change-out schedule or using an air-supplied respirator or SCBA. Failure to follow this warning can result in serious personal injury or death. As a reference, below is a partial list of substances having poor warning properties:</p>

Lightweight and Compact Heat Gun

- Variable temperature control allows for adjustment of the heat settings
- Built-in overload protection shuts the heating element down and prevents burn up
- Built-in innovative kickstand support provides greater stability and prevents tip over
- Separate Internal Components allows maintenance on both the motor and the heating element

ANRITSU

Primus Electronics is proud to have teamed up with Anritsu to offer the following certification courses in the tower industry:

Anritsu Site Master™ Certified Line Sweep Training

2 Day Course

This intense, hands-on course focuses on RF-line sweep theory, technology, and practical applications. Students will learn the skills necessary to install, test, and maintain RF cable feed lines and antenna systems and gain unique insights to line sweeping projects. Upon successful completion of the course, which includes a certification exam, students will receive a Site Master Certificate of Completion along with a photo identification card.

Attendees should include:

- Wireless Carriers
- Base Station OEMs
- Tower Companies
- Field Engineers
- Installers
- Site Managers

Upon successful completion of the course, students will learn:

- Technical aspects of line sweeping
- How to set up a line sweep
- How cable length, cable type, and system components affect line sweep measurements
- How to use DTF to get accurate and meaningful distance to fault results
- How to identify, locate, document, and resolve cable line transmission faults

e-Learning Courses

These courses are offered at no charge through Anritsu. All you need to do is register for the course(s) on Anritsu's website. Registration will give you access for 30 days and you can view the course as often as you like.

Site Master Line Sweep Web-Based eLearning Course

This on-line course provides training on the basics of line sweeping and operation of Site Master. This is not a certification course.

Line Sweep Interpretation Web-Based eLearning Course

On-line course that provides training on how to interpret Line Sweep data and how to use Handheld Software Tools and Master Software Tools. It includes instruction on important technical terms, how a Line Sweep measurement is made, what reflections look like, and how to determine if they are in spec or not. This is not a certification course.

Protecting Performance eLearning Course

This on-line course provides training on maximizing the life of your handheld test equipment such as the Site Master, calibration components, and power sensors. A passing score results in the opportunity to print a training certificate.

Site Master TMA Measurements Web-Based eLearning Course

Free on-line course that provides training on performance verification of Tower Mount Amplifiers. The course includes quiz questions and the opportunity to print a training certificate at the end of the course if you pass the test.

Master Software Tools (MST) Web-based eLearning Course

Free on-line course that provides training on use of Master Software Tools™ (MST) as it relates to Line Sweep data. Learn how to open, annotate, and save files. Features a demo of the software and tips for productivity enhancement. The online course takes less than an hour to complete.

Introduction to Spectrum Analysis Web-based eLearning Course

This on-line course provides training on the basics of spectrum analysis. It is a beginner level course and there are no prerequisites. A virtual spectrum analyzer is included and is used for virtual labs in a demonstration of key concepts.

All of the above e-Learning courses can be accessed online at www.anritsu.com

Training Classes

All courses can be taken to earn a Basic Certificate in Communications Industry Safety Training, an Accreditation Program offered on-site or by Kankakee Community College, Kankakee, IL.

CITCA Certifications

Primus Electronics is proud to have teamed up with Communications Industry and Training Certification Academy (CITCA) to offer the following certification courses in the tower industry:

Authorized Climber Certification

8 Hour Class

Prepares individuals with little or no experience to be able to safely climb and work on towers of various types and styles. Upon completion of this program, the authorized climber should be able to demonstrate proper knowledge, understanding, and application of the equipment used, as well as safe practices to be employed at all times when he or she is working on the tower. The course is designed in cooperation with OSHA and meets or exceeds all of the recommended training called for in the NATE guidelines for Qualified Climber. Upon successful completion, each student will receive a wallet card certifying them as an Authorized Climber.

Tower Rescue and Competent Climber Certification

(3) 8 Hour Days

This course exceeds the minimum requirements set by OSHA for the tower erection industry. Course contents includes, but is not limited to: rescue training, knowledge of fall arrest systems, anchors, and Accident Reporting procedures. The course is taught by vertical rescue specialists and experts in the tower erection and rescue industry.

Train-the-Trainer Courses

Training is a critical component in safe work practices. It is an expensive component as well. And sometimes, scheduling training around work schedules and client deadlines is nearly impossible. CITCA's Train the Trainer program gives you the opportunity to have your own employees trained as CITCA instructors, and allows you to offer CITCA's acclaimed training courses as an in-house program, using your instructors, at your facility, at your convenience, and at a substantially lower cost. At the same time, upon completion, your employees still receive CITCA certification, which is recognized and accepted across the nation.

Train-the-Trainer Courses available in the following:

Authorized Climber Train the Trainer

Trains the instructor to teach Authorized Climber, a one day certification course that teaches basic tower climbing and tower safety techniques.

Tower Rescue / Competent Climber Train the Trainer

Trains the instructor to teach Tower Rescue and Competent Climber, a 24-hour course that provides training in advanced tower climbing techniques, as well as lifesaving training in techniques of self-rescue and partner rescue.

NOTE: All CITCA Train-the-Trainer instructors must first hold CITCA certification in the class they are being trained to teach

Other Available Classes

Advanced Understanding of Rigging and Ropes, 8 Hour Class

OSHA Construction Industry, 10 Hour Class

Tower Erection Basics, 8 Hour Class

RF Safety and Hazard Awareness, 8 Hour Class

Emergency Medical Response, 8 Hour Class

HARGER Educational Presentations

Primus Electronics is proud to have teamed up with Harger to offer the following educational presentations in the tower industry:

General Grounding & Bonding

60 Minute Presentation

Provides an overview of electrical grounding and bonding and the role it plays as the foundation to any electrical protection and power quality scheme. Relevant codes, standards and practices, as well as the elements of a properly designed grounding system will be reviewed. The purpose and means for equipment and system grounding will be presented. The hazards of step and touch potentials will be discussed and how they are eliminated as a threat to personal safety. Soil and ground system testing will be discussed and their importance to system design. Grounding and bonding for lightning protection, computer installations, and telecommunications will also be reviewed.

Ultraweld Exothermic Welding Certification Training (Classroom and Hands-On)

90 to 120 Minute Presentation

Provides an understanding of the Ultraweld exothermic welding process. The exothermic welding process is presented as a means of making permanent electrical grounding connections. The tools required to make a connection as well as the inspection process are discussed. This course includes hands-on training and the certification process.

Lightning Protection Systems

60 Minute Presentation

Provides the audience with a review of lightning and the need for lightning protection systems. The Basic Principles of Lightning Protection are discussed—technology universally recognized and approved by the worldwide academic community. Also discussed are unapproved non-conventional lightning protection devices such as early stream emitters (ESE) and charge transfer systems (CTS) which promote technically unaccepted claims of increased areas of protection, or the ability to prevent lightning strikes entirely. The method for conducting a Lightning Risk Assessment (per NFPA780) is presented. Applicable lightning protection Codes and Standards are presented. The basic components of a traditional Franklin Style Lightning Protection Systems are reviewed.

Lightning Protection & Grounding Wireless Communications Sites

100 Minute Presentation

Covers the approaches taken and products used for grounding wireless communication sites. Focus is placed on the different types of ground electrodes used and recommendations for difficult grounding conditions. Ultraweld exothermic connections are discussed as well as consideration for different types of ground conductors. Ground system design considerations are discussed including soil conditions and site conditions/applications such as raw land, co-locate, and rooftop. Ground test procedures are also reviewed and standards are addressed.

Basics of Ground Testing

45 Minute Presentation

Reviews the different types of testing procedures and equipment used for soil resistivity and ground system testing. Focus is placed on the 4-Point Wenner test for soil resistivity measurements and the 3-Point Fall-of-Potential Method for measuring the resistance to remote ground of a ground electrode system. Clamp-on ground testers are discussed with focus on the advantages and the disadvantages of this method for measuring ground resistance.

BIRD Technologies Training

Primus Electronics is proud to have teamed up with BIRD Technologies to offer the following certification courses in the tower industry:

Site Analyzer Certificate Training*

2 Day Course

Bird® Technologies offers specialized training for all of its Site Analyzer (SA) family of products from the SA-1700EX, 1700-EXP, SA-2500EX and SA-6000EX. Bird® Site Analyzers® (pages 131-132) are an easy-to-operate, user friendly solution for troubleshooting even the most complex antenna and feed line systems. The Site Analyzer provides sweep and match data, showing VSWR, Return Loss, or Cable Loss (Insertion Loss) depending upon the users preference, as well as distance to fault measurement for system repair and maintenance. Topics will include basic RF theory, site overview and operation, equipment set-up and use, test and measurement of feed line and antenna system characteristics, and documentation and report analysis.

Attendees should include: Cell Site Manager, Site Technicians, Field Engineers, Site Installers, Cell Carriers, and Construction Companies

Line & Antenna Sweeping Certificate Training*

2 Day Course

Bird Technologies Global Educational Services offers specialized training for all of its Site Analyzer® (SA) family of products from the SA-1700EX, 1700EXP, SA-2500EX and SA-6000EX, as well as the Anritsu Site Master®. Topics will include basic RF theory, site overview and operation, equipment set-up and use, test and measurement of feed line and antenna system characteristics, and documentation and report analysis. Training centers on a practical, real-world approach to line sweeping and distance to fault measurement. Upon completion of training, each participant will receive Site Analyzer® or Site Master® certification, issued by Bird Electronic Corporation, that shows the participant has acquired the skills and understanding to successfully operate the Bird Site Analyzer or Anritsu Site Master under the field conditions covered by the course.

Attendees should include: Cell Site Manager, Site Technicians, Field Engineers, Site Installers, Cell Carriers, and Construction Companies

*Non-certification classes are also available which do not include testing, but does offer familiarization training with the products and processes. Good for those needing an overview or refresher, but not in-depth operational training.

BIRD Technologies Training

Primus Electronics is proud to have teamed up with Bird Technologies to offer the following certification courses in the tower industry:

Bird Signal Hawk Certificate Training*

2 Day Course

Signal investigation techniques have never been easier with the use of portable equipment including the Bird Signal Hawk. The Signal Hawk is a hand-held spectrum analyzer which will aid in understanding the RF environment in an area or the RF output of a device. The class primarily focuses on the Bird Signal Hawk and its initial implementation as a spectrum analyzer. Upon completion of training, each participant will receive a Bird Spectrum Analyzer Certification, issued by the Bird Technologies Group, that shows that the participant has acquired the skills and understanding to successfully operate the Bird Signal Hawk under field conditions covered by the course.

Attendees should include: Field Engineers, Shop Technicians, Design Engineers, Communications Contractors, Site Construction Companies, and Communication Site Managers

In-Building Coverage Certificate Training

2 Day Course

TX RX Systems Inc., part of the Bird Technologies Group, through GES, offers specialized training in the assessment, design, installation and commissioning of RF coverage enhancement systems, as well as comprehensive, hands-on training in the operation and optimization of the TX RX Signal Booster product line. Topics will include basic RF theory, FCC rules and regulations governing Signal Booster systems, typical applications, system design and optimization, equipment set-up and use, and system maintenance. Upon completion of training, each participant will receive Signal Booster II certification, issued by the BTG/GES, that shows the participant has acquired the skills and understanding to successfully operate the Signal Booster II under the field conditions covered by the course.

Attendees should include: RF Site Manager, RF Site Technicians, RF Site Installers, RF Field Engineers, and RF System Engineers

*Non-certification classes are also available which do not include testing, but does offer familiarization training with the products and processes. Good for those needing an overview or refresher, but not in depth operational training.

KAELUS PIM Training

Primus Electronics is proud to have teamed up with Kaelus to offer the following certification courses in the tower industry:

Portable PIM Test Equipment Training & Certification

Effective Passive Intermodulation (PIM) testing requires knowledge, practical skills, and properly maintained test equipment. Kaelus offers a variety of training options that teach engineers, technicians, and installation crews the skills needed to construct and maintain “low PIM” RF infrastructure.

Non-Certification PIM Training (Level 0):

4 Hours

Introductory training classes are available that provide an overview of PIM testing that is suited for audiences with a broad range of technical skills. This class defines PIM in easy-to-understand terms, identifies typical PIM sources, and describes how to safely operate PIM test equipment to repair RF infrastructure.

Attendees should include: RF design engineers, RF optimization engineers, Site maintenance technicians, Management, Installation project leaders, Installation technicians, and PIM Test Technicians

Certification PIM Training (Level 1):

Technician Certification training classes are also available that include a practical, as well as written exam requiring students to demonstrate test proficiency and show that they have an understanding of the course materials presented. Class size for technician certification training is limited to ensure that each student receives sufficient time with the instructor and the test equipment. Certification training is recommended for individuals who lead PIM test crews or who perform PIM testing in the field as a job requirement.

Attendees should include: Site maintenance technicians and PIM test technicians

ODM Fiber Optic Certification Training

Primus Electronics is proud to have teamed up with ODM to offer the following certification course in the tower industry:

Certified Fiber Optic Test and Inspection Training

The ODM Inc. Certified Fiber Optic Test and Inspection course is a focused, hands-on, training course that concentrates on Fiber Optic Connector Inspection and Insertion dB loss theory, technology, and field applications. Measurement, analysis, and archive storage principles are taught using the industry approved ODM VIS 300 Video Inspection Scope and RP 460/ DLS Optical Power Meter and Dual Light Source.

Students learn international industry standards on fiber optic connector endface analysis and accepted connector cleaning techniques. In addition, students review industry accepted dB insertion loss measurements on multimode and singlemode fiber types including industry popular connector styles including LC and SC connectors.

Classes are industry specific and can be customized to each Carrier's closeout requirements providing the student with the skills necessary to install, inspect, test, and maintain all fiber optic systems. ODM certified instructors present the latest standards and validate the certification course with written exams and hands-on training. Course certification remains valid for a period of two years.
